

# HARD DRIVE COLD STORAGE AND DATA DESTRUCTION

One program that Commercial Integrators rely on to meet the evolving landscape of the financial industry is *cold storage*. Cold storage refers to physically maintaining inactive data for a customer specified period of time in a secure PCI Compliant Environment. Renova's Cold Storage and Data Destruction programs protect customer data while maintaining the financial institution's ability to access information as needed, when needed.

**"COLD STORAGE AND DATA DESTRUCTION  
GIVES OUR ORGANIZATION THE ABILITY TO  
DRIVE REVENUE AND VALUE TO OUR  
CUSTOMERS"**

- SDM 100 INTEGRATOR

## COLD STORAGE

We work with leading financial institutions and law enforcement agencies for our commercial security integrator customers. As an after-market services provider, we remain invisible as an extension of the integrators. Retired DVR units are sent to Renova containing hard drives. Renova is PCI Compliant (Payment Card Data Services). The hard drives are pulled and stored (in library fashion) for a customer specified period of time. At the end of the storage period, hard drives are physically destroyed on-site and a certificate of destruction is provided.

Renova's service repair menu includes over 250+ manufacturers, many used in banking, including 3VR, Verint, and March.

## VIDEO RETRIEVAL

During the specified storage period banks may obtain video as needed. In a controlled and secure environment, video is retrieved and sent to the appropriate requester in their preferred media, ranging from banks to law enforcement agencies.
